

Orchard Combat Training Center

Located in the southern part of Idaho, Gowen Field is the only Joint Military installation in Idaho and is the only National Guard facility in the region focused on providing Total Joint Force training. For two decades, the installation annually has provided support and facilities for the field and classroom training of military personnel from all services. The Gowen Field complex is adjacent to the Boise International Airport and is located on 576 acres, with the Gowen Field Training Area consisting of 136,948 of which 86,459 is maneuver area, just south of the main post area.

A state-of-the-art Multi-Purpose Range Complex –Heavy permits armor, mechanized infantry, combat aviation, dismounted and motorized Units-Army and Air Guard to conduct live-fire exercises and annual crew qualification. Recent additions to training facilities include an Live Fire Convoy Range and a 50 K Mounted Land Navigation Course.

Exclusive Tent Rentals in Idaho, 2013

Exclusive Tent Rentals specializes in working in military training bases with the extreme weather conditions- efficiently and safely. Exclusive Tent Rentals does a lot of work for the Department of Defense. For this particular job in Idaho, two other contractors subcontracted Exclusive Tent Rentals for the installation and removal of several tents (150,000 Square Feet), sufficient HVAC units, generators, and back-up generators.

Exclusive Tent Rentals had to mobilize from Fontana, CA to Boise Idaho to install Tents, HVAC, Generators, Lighting, Flooring, and Power Distribution. Using our own tractors and trailers we were able to travel interstate to get all of the necessary material to our crews who were ready to install. Our drivers and installers worked so efficiently that we were able to finish ahead schedule.

Exclusive Tent Rentals worked in the Orchard Combat Training Center. There were 2 locations where we installed approximately 30,000 square feet of structures and another 3 locations where we installed approximately 18,000 square feet of structures. In other remote locations we installed DFAC Tents and Sleep Tents equipped with sufficient HVAC units, generators, and back-up generators. Our drivers and installers had to move from location to location through the rough terrain. It was a bit challenging to carefully transport our HVAC units off-road because they would easily get damaged. Overall our crew was successful and we were able to get the job done.
